

GIN Speedflyer Harness: guidance for use.

The GIN Speedflyer Harness is a second-generation reversible harness/rucksack designed specifically for speedflying.

Many hours of R&D have gone into making the GIN Speedflyer Harness simple and functional for hassle free Speedflying use.

The rucksack side of the harness has ski and equipment attachments for touring and mountaineering.

The rucksack is reversible into the "harness" position.

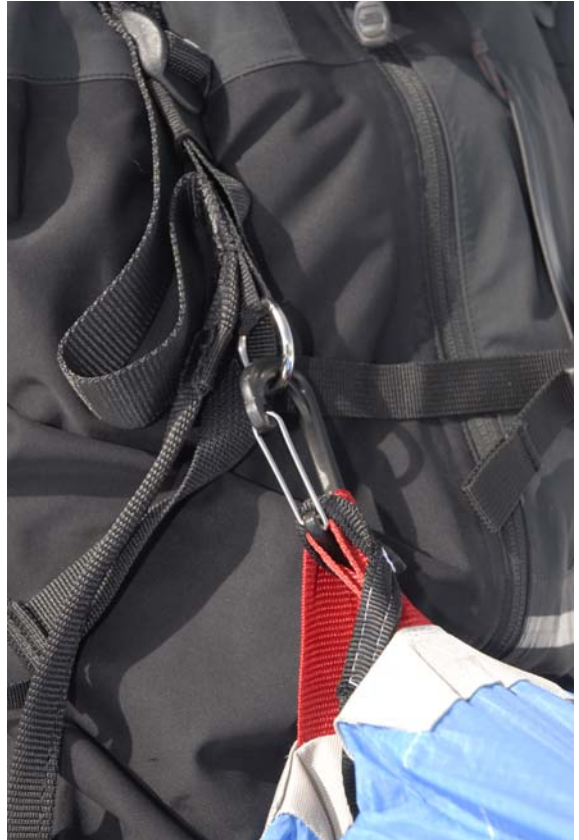

While wearing the harness for Speedflying, there is a "Quick Pack Bag" in a zipped pocket on the right leg. Use it to carry your bundled Nano while skiing to lifts between runs...

Bundle the canopy into the bag. Close the bag, pulling the black strap.

Close bag with the carabiner through the red straps, then fix the carabiner onto the ring found on the harness shoulder.

Easy, out of the way and stress-free!

Back up to take off, take the canopy out and return the Quick Pack Bag to its pocket.

Enjoy your GIN Speedflyer Harness, Happy riding!!

Warning

The advice contained in this booklet cannot replace instruction from a dedicated school, with competent, qualified instructors.

Speedflying is a potentially dangerous activity that requires specific training for your own and other's safety. It is very important that you learn in a controlled school environment with suitably qualified instructors.

We strongly advise you to discover flying your Nano under the guidance of these professional instructors and schools.
